6.1.5 Harf ebced sayıları birleştirilerek Quran’ın tekrar yazılması temelli Demir ayeti delilli kodları

Bu delilde, üç bağımsız demir ayet kodumuz var ve bunlar birbirlerini tamamladıkları için bir araya gelerek başka bir büyük delil oluşturuyorlar.

Üç kodun her birinin ortak kodlama örüntüsü, Kuran ayetlerinin Arapça metnini, metinde görüldüğü gibi her harfi Ebced sayısıyla değiştirerek yeniden yazmaya dayanmasıdır. Tüm kodların *genel ayet dizinleri* vardır ve bunlar 1’den 6236’ya kadardır. Bu, bu kod

örüntüsünün, metinde görüldüğü gibi her harfi Ebced sayılarıyla değiştirerek Kuran ayetlerini tam anlamıyla yeniden yazdığı anlamına gelir. Bu üç kod, Demir ayeti de dahil olmak üzere her yerde bulunur ve Kuran'ın 6236 numaralı ayeti üzerinde bulunur.

Kod 1: İlk kod, yukarıda açıklandığı gibi Demir (el-Hadid) ayetini yeniden yazdığımızda, ortaya çıkan kodun 26'nın katı olmasıdır.

Kod 1 kodlama örüntüsü:

> [Demir ayetinin genel ayet indeksi (5100) | Metinde görüldüğü yerde Demir ayetindeki her harfin Ebced değeri ile değiştirilmiş hali]

Kod 2: İkinci kod, yukarıda açıklandığı gibi Demir (el-Hadid) ayetine kadar olan tüm Kuran ayetlerini yeniden yazdığımızda, ortaya çıkan büyük sayı kodu 26'nın katıdır. Matematiksel özellik nedeniyle, Kuran'ın başlangıcından Demir ayetine kadar, Demir ayeti dahil veya hariç, her iki kodun büyük sayıları 26'nın katıdır.

Kod 2 kodlama örüntüsü: Demir ayetine kadar olan Kod 2, Demir ayeti hariç tutularak, aşağıda gösterilmiştir.

> [Demir ayetinin genel ayet indeksi (5100-1) | Metinde görüldüğü yerde ayetteki her harfin Ebced değeri ile değiştirilmiş hali] … [2. ayetin genel ayet indeksi | Metinde görüldüğü yerde ayetteki her harfin Ebced değeri ile değiştirilmiş hali] [1. ayetin genel ayet indeksi | Metinde görüldüğü yerde ayetteki her harfin Ebced değeri ile değiştirilmiş hali]

Demir ayetine kadar olan Kod 2, Demir ayeti dahil tutularak, aşağıda gösterilmiştir.

> [Demir ayetinin genel ayet indeksi (5100) | Metinde görüldüğü yerde ayetteki her harfin Ebced değeri ile değiştirilmiş hali] … [2. ayetin genel ayet indeksi | Metinde görüldüğü yerde ayetteki her harfin Ebced değeri ile değiştirilmiş hali] [1. ayetin genel ayet indeksi | Metinde görüldüğü yerde ayetteki her harfin Ebced değeri ile değiştirilmiş hali]

Kod 3: Üçüncü kod, yukarıda açıklandığı gibi Demir (el-Hadid) ayetinden Kuran'ın sonuna kadar olan tüm Kuran ayetlerini yeniden yazdığımızda, ortaya çıkan büyük sayı kodu 26'nın katıdır. Matematiksel özellik nedeniyle, Demir ayetinden itibaren veya sonrasında, Demir ayeti dahil veya hariç, Kuran'ın sonuna kadar, her iki kodun büyük sayıları 26'nın katıdır.

Kod 3 kodlama örüntüsü:

Öncelikle Kod 3'ün ana kodunun ve daha kısa kodunun kodlama örüntüsünü sunacağım.

İlk ayetten 6236 numaralı ayetlerin son ayetine kadar olan kodlama örüntüsü:

> [Son ayetin genel ayet indeksi (6236) | Demir ayetindeki her harfin ebced değeri, harfin yazılı metindeki yerine yerleştirilir] [6235. ayetin genel ayet indeksi | Demir ayetindeki her harfin ebced değeri, harfin yazılı metindeki yerine yerleştirilir] … [İkinci ayetin genel ayet indeksi (2) | 2. ayetteki her harfin ebced değeri, harflerin yazılı metindeki yerine yerleştirilir] [İlk ayetin genel ayet indeksi (1) | 1. ayetteki her harfin ebced değeri, harflerin yazılı metindeki yerine yerleştirilir]

Daha kısa kodun kodlama örüntüsü ise, Demir ayetinden sonraki ayetten 6236 numaralı ayetlerin son ayetine kadar olan kısımdır:

> [Son ayetin genel ayet indeksi (6236) | Demir ayetindeki her harfin ebced değeri, harfin yazılı metindeki yerine yerleştirilir] [6235. ayetin genel ayet indeksi | Demir ayetindeki her harfin ebced değeri, harflerin yazılı metindeki yerine yerleştirilir] … [Demir ayetinden sonraki ayetin genel ayet indeksi (5100+1) | Demir ayetinden sonraki ayetteki her harfin ebced değeri, harflerin yazılı metindeki yerine yerleştirilir]

Yukarıda açıklanan üç kod göz önüne alındığında, matematiksel özellik nedeniyle, Kuran'ın başından sonuna kadar, Kuran'ı yukarıda açıklandığı gibi yeniden yazarsak, çıkan bu büyük kodlama sayısının da 26'nın katı olduğu anlamına gelir. Bu kodlar, evrenin özel güçlü elementi olan Demir'e dayalı olarak Kuran'ın tüm metni üzerinde güçlü bir kodlama olduğunu göstermektedir ve bozulmamış bir tasarım olduğunu önermektedir. Demir, Kuran'da bir sureye adını veren tek elementtir ve aynı zamanda Kuran'ın ortasında yani merkez suresindedir.

Bu üç kodu yeniden üretmek ve doğrulamak için R kodları aşağıda sırasıyla sunulmaktadır.

```
x<- nQuran # 6236 numaralı ayet
ii <- which(x$chapter== 57 & x$verse==25)
print("6236 numaralı ayet içindeki Demir ayetinin Genel Ayet
İndeksi:")

## [1] "6236 numaralı ayet içindeki Demir ayetinin Genel Ayet
İndeksi:"

print(ii)

## [1] 5100

#
RmHamza=T # Ebced sayıları olmadığı için Hemze karakterlerini kaldır.
j <- which(x$verse==0)
```

```r

print(nchar(tmp))

## [1] 598233
```

Yukarıda gördüğümüz gibi, Kuran'ın tamamında birbirini tamamlayan bu üç kod da 26'nın katıdır. Bu 3 kodu 6348 ayetin metin türünde de test edebileceğimizden, bu kanıtı üç kodla görme olasılığı 2/(26x26x26) = 2/17576 olarak tahmin edilebilir, bu da 8788 denemede 1'dir. Aşağıda, kolay erişim için her bir kodun büyük sayılarını alt bölümler halinde vereceğim.

Bunu kendiniz test etmek için bu büyük sayı hesaplayıcısını kullanabilirsiniz: goodcalculators.com/big-number-calculator/

6.1.5.1 Kod 1 büyük sayı

Delil 6.1.5'nin aşağıda sunulan Kod 2 büyük sayısı "236" basamaklıdır:

“5100710770106100530301501210100030125306020065200905010504053030140307010306601503030708015040641043006012510804104830115030750169601003012601503014061001030501710403016214002030140570401503075016400150102301215030602001503060200141003 0”

Bunu kendiniz test etmek için bu büyük sayı hesaplayıcısını kullanabilirsiniz: goodcalculators.com/big-number-calculator/

6.1.5.2 Kod 2 büyük sayı

Delil 6.1.5’nin aşağıda sunulan Kod 2 büyük sayısı “535957” basamaklıdır:

Bunu kendiniz test etmek için bu büyük sayı hesaplayıcısını kullanabilirsiniz: goodcalculators.com/big-number-calculator/

6.1.6 26 tabanlı Kuran’ı Yeniden Yazma

Önceki Delil 6.1.5 bölümünde, birbirini tamamlayan 3 kod gözlemledik. Ancak matematiksel özellik nedeniyle, 3 kodu bir araya getirmek, bize Kuran’ı Ebced sayılarıyla yeniden yazmayı temsil eden başka bir kod verecektir. Delil 6.1.5 bölümünün Kod 3’ünü (tam metin versiyonu) gözlemledim; bu kod, Kuran’ın 6236 numaralı ayetinin tam metnini 26’ya göre yeniden yazıyor. Bu bölüm altında sunulacak tüm kodları takip etmek için, 26’nın katı olan ve Kuran’ın 6236 numaralı ayetinin tam metnini temsil eden bu koda, bu mevcut bölümün (6.1.6) Kod 1’i diyorum. Bahsettiğim gibi, bu büyük kod, 6.1.5 Bölümündeki diğer 3 kod dikkate alındığında matematiksel bir özelliğin sonucudur. Ancak bu durum, bu özel ilginç kodlama örüntüsünün herhangi bir özelliği olup olmadığını ve Kuran’ın tam metnini 26 sayısına göre yeniden yazmayı temsil eden başka benzer kodlar olup olmadığını sorgulamama neden oldu. Ardından, Kuran’ın tüm 6348 ayetini kullanarak aynı kodlama örüntüsünü test ettim ve ortaya çıkan büyük kodlama sayısının da 26’nın katı olduğunu gördüm. Bu yeni koda bu bölümün Kod 2’si diyorum. Diğer kodları açıklamadan önce, bu iki kodu burada gösteriyorum:

Kod 1: Kuran ayetlerinin Arapça metnini, metinde görüldüğü gibi harflerin her birini Ebced sayılarıyla değiştirerek yeniden yazmaya dayanmaktadır. 1’den **6236**’ya kadar olan *genel ayet indeksleri*, her ayetin başına eklenir. Bu, bu kod örüntüsünün, Kuran ayetlerini kelimenin tam anlamıyla, metinde görüldüğü gibi her harfi Ebced sayılarıyla değiştirerek yeniden yazdığı anlamına gelir. İlk ayetten 6236 numaralı ayetlerin son ayetine kadar olan kodlama örüntüsü aşağıdaki gibidir:

> [Son ayetin genel ayet indeksi (6236) | Demir ayetindeki her harfin ebced değeri, harfin yazılı metindeki yerine yerleştirilmiş] [6235. ayetin genel ayet indeksi | Demir ayetindeki her harfin ebced değeri, harfin yazılı metindeki yerine yerleştirilmiş] … [İkinci ayetin genel ayet indeksi (2) | 2. ayetteki her harfin ebced değeri, harflerin yazılı metindeki yerine yerleştirilmiş] [İlk ayetin genel ayet indeksi (1) | 1. ayetteki her harfin ebced değeri, harflerin yazılı metindeki yerine yerleştirilmiş]

Kod 2: Kod 1 ile aynıdır, ancak Kuran’ın tüm 6348 ayetinde geçerlidir. İlk ayetten 6348 ayetin son ayetine kadar olan kodlama örüntüsü aşağıdaki gibidir:

> [Son ayetin genel ayet indeksi (6348) | Demir ayetindeki her harfin ebced değeri, harfin yazılı metindeki yerine yerleştirilmiş] [6347. ayetin genel ayet indeksi | Demir ayetindeki her harfin ebced değeri, harfin yazılı metindeki yerine yerleştirilmiş] … [İkinci ayetin genel ayet indeksi (2) | 2. ayetteki her harfin ebced değeri, harflerin yazılı metindeki yerine yerleştirilmiş] [İlk ayetin genel ayet indeksi (1) | 1. ayetteki her harfin ebced değeri, harflerin yazılı metindeki yerine yerleştirilmiş]

Bu örüntü, bir ayetteki Ebced sayılarını Arapça'daki gibi sağdan sola yazılı metin düzeni yerine normal düzende (soldan sağa) yazarsak daha da ilginç hale gelir. Bu örüntünün o versiyonunu oluştururs ak, ortaya çıkan büyük sayı hala 26'nın katıdır. Dahası, bu örüntüyle, kodun 1. ayetten Demir ayetine (dahil) kadar olan kısmına bakarsak, bu kod da 26'nın katıdır.

Kod 3: Kod 1'e benzer, ancak Ebced dizisi yerine, her kelimenin Ebced değerini kullandık. Bir kelimenin Ebced değeri, o kelimedeki her harfin ebced sayılarının toplanmasıyla hesaplanır. İlk ayetten 6236 numaralı ayetin son ayetine kadar olan kodlama örüntüsü aşağıdaki gibidir:

> [Son ayetin genel ayet indeksi (6236) | Ayetteki her kelimenin ebced değeri, kelimenin yazılı metindeki yerine yerleştirilmiş] [6235. ayetin genel ayet indeksi | Ayetteki her kelimenin ebced değeri, kelimenin yazılı metindeki yerine yerleştirilmiş] … [İkinci ayetin genel ayet indeksi (2) | 2. ayetteki her kelimenin ebced değeri, kelimenin yazılı metindeki yerine yerleştirilmiş] [İlk ayetin genel ayet indeksi (1) | 1. ayetteki her kelimenin ebced değeri, kelimenin yazılı metindeki yerine yerleştirilmiş]

Her kelimenin Ebced değerine dayanan bu kod, kodu ters yönde yazarsak hala 26'nın katı olduğu için daha da ilginçtir. Yani, her iki yönde de bu büyük kod 26'nın katıdır. Dahası, bu ters yönde, kodun 1. ayetten Demir ayetine (dahil) kadar olan kısmını alırsak, o da 26'nın katıdır.

Genel ayet indeksi ve harflerin, kelimelerin ve ayetlerin yazım sırasıyla (Arapça'daki gibi sağdan sola), 4 olası durumdan 3'ünde 26'nın katı olan 3 yeniden yazma kodu gözlemledik. Binom testi, böyle bir olayın olasılığının yaklaşık 4500'de 1 olduğunu gösteriyor. İşte olasılık hesabı:

```
tmp <-binom.test(3, 4,p = 1/26,alternative = c("greater"))
# tmp$p.value # 0.0002210182

tmp1 <- formatC(tmp$p.value, format = "e", digits = 2)
```

```r
print(paste("Olasılığı", 4, "denemenin",3,
            "başarılı olma (p=1/26 ile) durumu:", tmp1))
```

```
## [1] "Olasılığı 4 denemenin 3 başarılı olma (p=1/26 ile) durumu:
2.21e-04"
```

Bu delilin başarılarını, kitabın genel olasılığını daha muhafazakar tutmak için, kitabın genel olasılığına dahil etmeyeceğim.

Üç kodu yeniden üretmek ve doğrulamak için R kodları aşağıda sırasıyla sunulmaktadır.

```r
tmpfunction <- function(x){
ii <- which(x$chapter== 57 & x$verse==25)
RmHamza=T # Ebced sayıları olmadığı için Hemze karakterlerini kaldır.
tmpl <- str_split(x$text," ")
tmp <- c()
for(i in 1:length(tmpl)){
  tmpi <- unlist(tmpl[i])
  tmp <- c(tmp, paste0(rev(AbjadSeqofwordsperVerse(tmpi,
                rev_=T, rmHamza_ = RmHamza,
                abjadL_=abjadL, abjadN_=abjadN2)),
                       collapse = "" ) )
}
# Genel ayet indeksleri eklendi
tmp2 <- paste0(1:length(tmp), tmp)
return(tmp2)
}

# Kod 1 (6236 ayetli Kuran): İlk ayet 1'den son ayete kadar.
